

Amendments to the Claims

1. (Previously presented) Medical apparatus for the treatment of living beings, using magnetic field therapy having a pulsating magnetic field, characterised in that an element, which radiates a pulsating magnetic field, is inserted into a vagina of a woman or into an anal region or a living being, the element being flexible and comprising an inert tube, into which magnetized or magnetizable balls are introduced in an attractive alignment, or magnetized or magnetizable rings are arranged in adjacent rows in opposite alignment, and which tube is shaped to form a ring.

2. (New) A medical apparatus incorporating magnetic field therapy, comprising:

an annularly shaped element;

an annularly shaped inert tube, wherein the inert tube is contained within the element; and

a plurality of magnetized balls, wherein the magnetized balls are introduced within the inert tube and arranged in an attractive alignment with respect to each juxtaposition magnetic ball.

3. (New) The medical apparatus of claim 2, wherein the annularly shaped element radiates a pulsating magnetic field.

4. (New) The medical apparatus of claim 3, wherein the apparatus is disposed for insertion into the vagina of a woman.

5. (New) The medical apparatus of claim 3, wherein the apparatus is disposed for insertion into the anal region of an individual.

6. (New) The medical apparatus of claim 3, wherein the medical apparatus provides treatment for the relief of medical conditions selected from the group consisting of unclear hypogastrium complaints, period pains, premenstrual syndromes and loss of libido.

7. (New) The medical apparatus of claim 3, wherein the annularly shaped element includes an inert coating.

8. (New) A medical apparatus incorporating magnetic field therapy, comprising:

an annularly shaped element;

an annularly shaped inert tube, wherein the annularly shaped inert tube is contained within the element; and

a plurality of magnetized rings, wherein the magnetized rings are introduced within the inert tube and arranged in an opposite magnetic charge alignment.

9. (New) The medical apparatus of claim 8, wherein the annularly shaped element radiates a pulsating magnetic field.

10. (New) The medical apparatus of claim 9, wherein the apparatus is disposed for insertion into the vagina of a woman.

11. (New) The medical apparatus of claim 9, wherein the apparatus is disposed for insertion into the anal region of an individual.

12. (New) The medical apparatus of claim 9, wherein the medical apparatus provides treatment for the relief of medical conditions selected from the group consisting of unclear hypogastrium complaints, period pains, premenstrual syndromes and loss of libido.

13. (New) The medical apparatus of claim 9, wherein the annularly shaped element includes an inert coating.
